Voice AI Engineer — Real-Time Conversational Systems & Voice-Agent Evaluation Infrastructure

EDUCATION

Indraprastha Institute Of Information Technology (IIIT), Delhi

Delhi, India

Bachelor of Technology, Electronics and Communications Engineering

2019 – 2023

EXPERIENCE

Coddle AI

Jan 2026 – Present

Lead AI Engineer

React Native, Node.js, Python, GCP, LiveKit, Deepgram, Cartesia, ElevenLabs

- Architected a **multi-model routing system** and **real-time voice infrastructure** — streaming transcription, interruption handling, and conversational state management — using LiveKit, Deepgram, Cartesia, and ElevenLabs.
- Built **automated evaluation pipelines** using **Langfuse** and custom observability systems for voice-agent reliability and behavioral analysis, spanning 30+ agent tool integrations and real-time conversational interfaces.
- Built **cora** Coddle AI's **voice-first** parenting assistant competing with **Huckleberry** and **Riley**, owning core product features across voice interactions, memory, and caregiver workflows.
- Engineered a **persistent memory layer** powering AI assistant's contextual recall of parent preferences and child routines, and a **RAG-powered lactation support assistant** combining retrieval pipelines with real-time conversational flows.
- Worked within an **AI-native engineering environment**, using Claude-assisted development as a shared **second** for specs and decisions, and building automation workflows for rapid iteration on voice infrastructure.
- Automated the **GitHub release pipeline** and shipped **over-the-air (OTA) updates** for the React Native app, cutting release cycles from **14 days down to 3 days** and significantly reducing manual release overhead.

SuperBryn (Voice AI)

Jul 2025 – Jan 2026

Founding Engineer #1

TypeScript, React, Python, FastAPI, Supabase, LiveKit, Docker, WebRTC

- Served as a **forward-deployed engineer**, embedding directly with partner companies to design, build, and ship production-grade voice agents and custom integrations into live customer environments.
- Integrated telephony infrastructure — **Twilio**, **SIP trunking**, and PSTN connectivity — so voice agents could place and receive real phone calls in production, not just web/app sessions.
- Built self-serve deployment tooling and **templated, industry-specific agent architectures** that took new enterprise voice agents from kickoff to production go-live in about a week, down from multi-week timelines.
- Built an **end-to-end voice-agent simulation and evaluation framework** — automated red-teaming, adversarial testing, prompt generation, interruption detection, tone analysis, adherence evaluations — plus **LLM-as-a-Judge observability** and custom evaluation pipelines for production agents.
- Developed **VoiceAssist**, a configurable LiveKit-powered voice-agent platform enabling users to deploy embeddable AI voice widgets with custom prompts and knowledge bases.
- Led core product architecture and infrastructure direction as engineer #1, including **Gatekeeper**, an open-source framework protecting widgets and outbound agents from spam, abuse, and malicious traffic.

Urban Company (prev. UrbanClap)

Jul 2023 – Jan 2025

Software Development Engineer - 1

TypeScript, NodeJS, React, MongoDB, MySQL, ELK Stack

- Led **peak-season scalability improvements** reducing Booking API P95 latency by **45%**, lowering error rates by **79%**, and cutting **\$5K/month** in AWS RDS costs through DB optimization.
- Built a **refund fraud prevention system** leveraging DBT insights, encrypted payment identifiers, and rule-based workflows, reducing abuse and saving **INR 5L/month**.

TECHNICAL SKILLS

Voice & Real-Time AI: LiveKit, Deepgram, Cartesia, ElevenLabs, WebRTC, Twilio, SIP/PSTN telephony, streaming transcription, Langfuse, LLM-as-a-Judge evaluation systems

Languages: JavaScript, TypeScript, Python, Java

Frameworks: SpringBoot, FastAPI, NodeJS, React, React Native, Tailwind CSS

Cloud & Infra: GCP, AWS, Docker, Kubernetes, Jenkins, GitHub Actions, ELK Stack, OTA release automation

Database: MongoDB, MySQL, PostgreSQL, Redis
